SAN GABRIEL VALLEY CLEANUP PROGRAM - GROUNDWATER MONITORING FOR NEWLY DISCOVERED CHEMICALS, BALDWIN PARK OPERABLE UNIT (BPOU)

Dear Mr. Miller:

In a letter dated December 26, 1996, we stated that we had adequate groundwater data and did not plan to request further sampling at your well (s). However, as you are probably aware, new chemicals have been recently found in production and monitoring wells within the BPOU. They have also been noted in nearby areas outside of the BPOU area. So far, these chemicals include perchlorate, 1,4-dioxane, N-nitrosodimethylamine (NDMA) and Methyl Tert-Butyl Ether (MTBE). Currently, research is underway to study the occurrence, adverse health effects, and remediation of these chemicals. One of these chemicals, 1,4-dioxane, is known to be associated with the use of 1,1,1-TCA.

We are asking you, along with other BPOU groundwater monitoring participants, to implement quarterly groundwater sampling and analysis for the above chemicals for two episodes. The first should be conducted in November 1998 and results reported by December 30, 1998. The last episode should be conducted in February 1999, and results reported by March 30, 1999. Your groundwater monitoring well(s) ought to be accessible pursuant to our request in the above-referenced letter.

Based on the results, a decision will be made if further sampling and analysis is warranted.
